

Fluoridation - the Great Political and Scientific Hoax

by Glen S.R. Walker

Purity in words, also in water quality, should be the aim of every person concerned with the health and freedom of the Australian people.

Purity of thinking is the key to all good, and anything to the contrary is an illegitimate fundamental falsity of pseudo pretence by those involved in compulsory mass medicating the population with fluoride chemicals.

Purity of drinking water supplies has become a world-wide scientific sham, a pretence of knowledge and care in the interest of people, regulated and under control of politicians voted into Parliament to not only serve the people but give purity of representation accordingly.

Purity of expression, relative to compulsory mass medicating a population with fluoridated water, and polluting with Unregistered and Unlicenced chemicals, is clouded with a turbid collection of disorder, untenable in the rules of science, completely lacking purity of expression in medicine, commonsense and indeed pharmacology.

Universally, fluoridation science, as pronounced by the fluoride lobby and its followers, supported by all Australian Governments to their disgrace, receive zero out of ten, for purity of their action against the Australian population.

Purity of thinking is the key to all good, anything to the contrary is an illegitimate fundamental falsity of pseudo pretence.

Chemistry is the science of purity that has now been seriously polluted by commercial interference, the fight for the mighty dollar that seems capable of even changing the sacred principles of pure chemistry and commonsense pharmacology.

Purity and honesty of thought and action are a partnership in the order of principle, a natural heritage of all people, allotted by nature in a manner of omnipotence.

Sadly, the legendary fluoridation myths promoted by fanatics with their choice of commercial sorcery, rather than purity of thought and action, have become the norm in these days of chasing the covert dollar, with pseudo science as their status of cleverness and a cover-up of their poor science, including the failure of fluoridation, all with their hand-over-heart promises and claims relative to fluoridation.

We are witnessing a replay of the past wonderfully safe home use of D.D.T. and all those other safe poisons for human use, commercially presented with Government approval, but found to be the absolute opposite of the presentation by "experts", indeed so many less toxic than fluoride, but none so commercially and politically powerful, as the process of polluting all drinking water supplies with an **Unlicenced** toxic waste disposal pollutant from fertiliser factory exhaust chimneys.

One can imagine that people of pure honest thinking would admit the utter failure of fluoridation.

The evidence is so clear, but cannot penetrate the entrenched thinking of politicians and scientists who cannot, for reasons not understood in an environment of purity of character, accept obvious facts.

The failure of fluoridation

The Federal Parliament is voicing much concern by quoting 500,000 Australians waiting 5 years and more for urgent dental treatment at taxpayers cost.

One can imagine that people of pure honest thinking would admit the utter failure of fluoridation, especially as Australia is officially rated as over 80% of the population is drinking fluoridated water.

Notwithstanding such dental disease in Australia, the dental decay factor is increasing, according to the official 1999 Report of the Australian Institute of Health, showing dental decay increasing by over 22% in children who are also drinking fluoridated water.

Medical Code of Ethics

All members of the Australian Medical Association should consider and indeed respect their Code of Ethics 1992 which states:

(1) "Evaluate your patient completely and thoroughly."

Their Code of Ethics is medically meaningless when officially coupled to the A.M.A. in their endorsement and promotion of compulsory artificial fluoridation, all without one iota of scientific proof that it is safe and the added fact that the fluoride water medicine is made up with NON-REGISTERED and NON-LICENCED fluoride chemicals, producing a daily drugging of a population without medical examinations or evaluating each person and all without pharmaceutical quality drugging.

Fluoridation is a pretending medical science.

Code of Ethics 3

"Treat your patient (the community) with compassion and respect for human dignity."

Is compulsory medication with artificial fluoridation, "compassion and respect", and is there any dignity in being daily drugged with unregistered and non-licensed industrial poisonous pollutant collected in exhaust chimneys of fertiliser factories?

Code of Ethics 6

"Build a professional basis on integrity and ability."

The common understanding and expectation is that "ability" is based on "integrity" which is only obtainable from purity of thinking, action and behaviour.

Advertising Code of the Australian Therapeutic Goods

Government Departments never stop producing grand new rules relating to the health of Australian people.

The rules of the Australian Therapeutic Goods (ATG) Advertising Code 2000 states:

"Solid evidence will be required before products can be advertised. Consumers have got to know products actually deliver" (deliver means effective)

Problems follow these new A.T.G. Advertising Codes, which if and as they should be accepted as Law, makes fluoridation their first casualty.

There are no scientific studies recorded in appropriate literature proving artificial fluoridation is safe and no person can be harmed.

There are no scientific studies recorded in appropriate literature proving artificial fluoridation is safe.

The strongest scientific, health, medical and pharmaceutical situation making dangerous nonsense of the A.T.G. Code is the FACT that the fluoride chemicals used in Australia to fluoridate the drinking water supplies are:

- Sodium Silicofluoride
- Hydrofluorosilicic Acid

Neither of these chemicals are registered and licensed for human use in drinking water supplies.

This was established in the U.S. Senate 2001 when the Food and Drug Administration (FDA) and the E.P.A., were questioned in the Senate regarding the Registration of these fluoride chemicals for human use.

Both the E.P.A. and the F.D.A. declared neither has any recorded evidence of safety nor any evidence of any such application for REGISTRATION.

Deception of Scientific Fact

Purity of action concerning the above fluoride chemicals is muddled in a turbid conglomerate of scientific, medical, political and legal flummoxed science in the extreme.

Our Constitution is a document of original purity of thinking, but today it is polluted in definition cowboy politicians and their statesmen of totalitarian quality.

Compliance is a foreign requisite of these people.

On New Year's Day 2001, the message by the Prime Minister of Australia, Mr John Howard, said:

"Australia is a Nation of Freedom and Individual Liberty."

There is no justice, freedom or liberty in compulsory medicating the population with toxic waste pollutant from fertiliser factories, especially as the Government knows the fluoride chemicals are NOT REGISTERED for human use in drinking water supplies and the chemicals are also contaminated with lead, arsenic and other prohibited products.

Do you consider the scientifically, intellectually dishonest claims of fluoridation safety, fits into the Prime Minister's description of freedom and liberty for all Australian people?

There seems a complete lack of cooperation with those actually involved: The People.

The previous **Australian Fluoridation News** March/April 2004 was a treatise on The Australian Constitution and fluoridation.

A copy was sent to the Prime Minister, the Australian Attorney-General, Minister for Health and all Heads of States asking for their opinion on the facts presented.

We received ONE reply to which further reference will be made, even though we offered space in our publication for their printed report.

When dealing with fluoridation, it is important to seek information from the highest authority in the land, so a written request was sent to the Australian Therapeutic Goods (A.T.G.) asking for their data in approval of Sodium Silicofluoride and Hydrofluorosilicic Acid for humans, dispensed to the public via the kitchen tap.

More letters requesting a reply have failed to get an answer!

The same experience is published in **Australian Fluoridation News** Sept./Oct. 2002, showing our correspondence with John Thwaites, Victorian Minister of Health and the lack of answering questions on fluoridation.

How can a health process be promoted by Governments with such savage purpose without the necessary science to support their claims and promises which have never eventuated?!

Fluoridation is a falsity of fictional pseudo pretence.

In effect we are fighting untouchable "ghosts" in a manner befitting the Government promoters.

GHOSTS (Oxford Dictionary)

*"bright spot on **secondary image** in the field of telescope (fluoridation) due to **defect in lens**".*

The purity of thought is having proper knowledge and expanding it for human benefit, but scientific logic is missing in claims by dentists and Governments that dental decay is more evident in non-fluoridated communities.

"Their assumption is a deception of scientific fact because they, the promoters, cannot and do not even attempt to isolate the presumed fluoride factor from so many other factors influencing caries incidents." (Rudolph Ziegelbecker, 1983)
